

Get Recommendations

“Recommendations” screen has 4 buttons, one for each comic book suggestion type for the app; Based on Comixology, Based on List, Based on Past Search, and Surprise Me.

There are also headings for *Pre-Filters* and *Content Options*, each with check boxes that allow the User to refine their results before asking for suggestions. These are copies of ones on Search screen.

Based on Comixology

1. User taps “Recommendations” icon and that screen opens.
2. User taps the Based on Comixology suggestion button.
3. Search Results screen opens with comics suggestions based on the items in the user’s Comixology library.

Exceptions

2a. If this is first time user has tapped this button *and* they haven’t setup a connection to their Comixology account in the **Options** screen then a modal pops up with login fields so they can sign in to their account now. Once they’re logged in, close the modal and advance to Step 3.

Tech Note: Close button for modal should be at bottom of modal, centered under the login boxes, so it’s easy for user to tap it with either right or left thumb (so it doesn’t matter which hand they usually one-hand hold their phone in).

Based on List

1. User taps “Recommendations” icon and that screen opens.
2. User taps the Based on List suggestion button.
3. An options wheel is triggered, with all the available archived lists.
4. User scrolls through wheel to find the list they want comics suggestions based on.
5. User taps the list they want to receive recommendations based on and scroll wheel closes.
6. Search Results screen opens with comics suggestions based on the list selected.

Based on Search

1. User taps “Recommendations” icon and that screen opens.
2. User taps the Based on Search suggestion button.
3. An options wheel is triggered, with all the archived last 10 searches the user performed on the app.
4. User scrolls through wheel to find the search they’d like to re-run.
5. User taps the search to re-run and scroll wheel closes.
6. Search Results screen opens with current results for that archived search term. Tech Note: Should apply any *Pre-Filters* or *Content Options* that the User currently has selected.

Exceptions

- 1a. Tech Note: If the user has no archived searches (because they haven’t performed any yet) then display a greyed-out state of the Based on Past Search button and deactivate it.

Surprise Me

1. User taps “Recommendations” icon and that screen opens.
2. User taps the Surprise Me suggestion button.
3. The algorithm runs a randomized search. Tech Note: Should still apply any *Pre-Filters* or *Content Options* that the User has made.
4. Search Results screen opens with comics suggestions based on randomized algorithm.
